

## SPRAY & PRIMING

This is a basic Step by step of using some priming products of Greenstuff World.

The first one is using the GSW priming sprays:

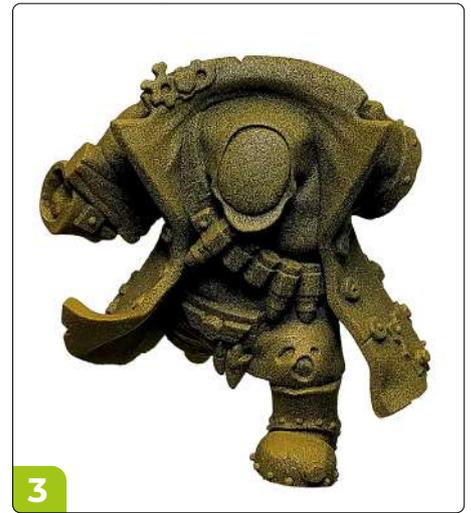

1

1. Resin model, with some blue-tak attached to the areas where we are going to glue other pieces later, to prevent them from getting painted.

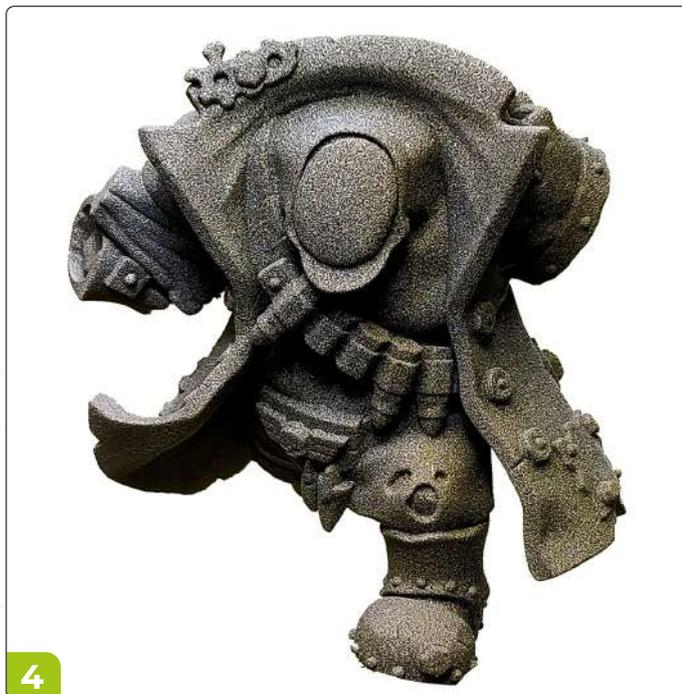

2

2. Black priming with spray. Good and smooth cover and matt finish.

3

3. Sand pre-shading by using the spray with a central position.

4

4. White pre-shading also using spray with central position, but this time with less cover..

Now we have the model ready to get painted, as we will see on future SBSs.

Finally, two pictures to show a simple test of the Black Matt Primer, that I normally use with the paintbrush on individual models or small parts: it gives a great cover with a really matt finish.

Hope you like it ;)
