

# PURPLE TEXTURIZED COAT

Another Step by Step using the Greenstuff World paints to test the main colors:  
A warm purple texturized coat.

1. Basecoat with Liche Purple.

2. First highlight with a 50 % mix of Liche Purple and Lollipop Magenta, covering most of the area.

3. Now highlight with 25/75 % mix of Liche Purple and Lollipop Magenta, using a soft stippling.

4. Third highlight with a 50 % mix of Liche Purple and Majin Pink, also stippling with the paint.

5. Now add a 25% of Golden Cream to the last mix and keep stippling aggressively to the main areas.

6. Now we add a bit of Banana Split to the last mix (20% Golden Cream, 40% Liche Purple, 40% Majin Pink, approximately) and highlight to reinforce the volumes and textures.

7. With pure Banana Split put some maximum light points and micro volumes and add some scratches and extra texture.

8. Give 2 general washes with highly diluted (80% water) mix of Liche Purple and Lollipop Magenta to the whole piece to add shadows and soften the aggressive textures.

9. Add some shadows with a couple of glazes with Lapislazuli to the main shadows areas.

10. Recover the main textures and light points using pure Banana Split again.

11. Finally, give a general wash with highly diluted Red Truth to add a reddish tone to the coat.

12. Ready! Hope you like it ;)
