PAINTING

GREEN TROLL SKIN

Another Step by Step using the @greenstuffworld paints: this time the color tested is green on this gorgeous Blood Bowl troll from @massivedragonminiatures.

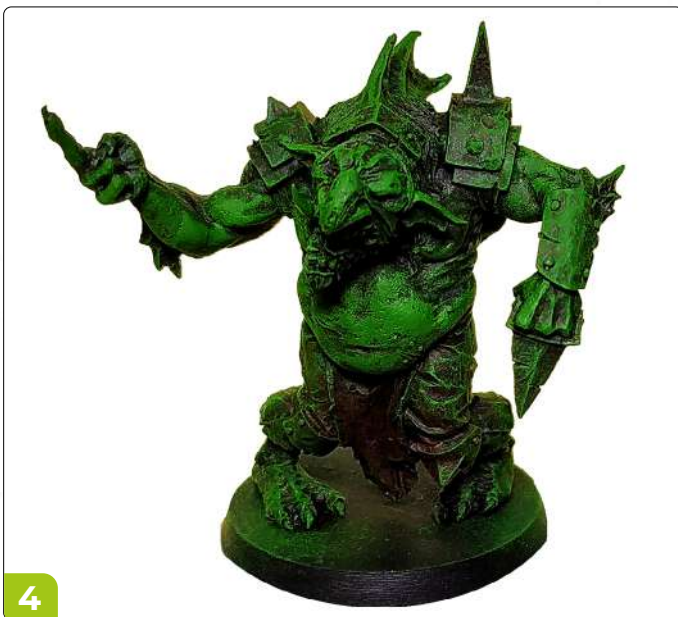

1. Priming with Matt Black.

2. First highlight using an energetic drybrush with Choco Brown.

3. Second highlight with a 50% mix of Forest Green and Choco Brown, also with heavy drybrushing.

4. For the third highlight, I drybrushed only with Hunter Green.

5. Here is the first step of different highlights, blending with a 80/20% mix of Hunter Green and Flubber Green.

6

6. Now I apply a couple of coats of slightly diluted Flubber Green.

7

7. Next highlights blending with a 50% mix of Flubber Green and Banana Split.

8

8. And for the last highlight I added some Ivory Tusk to the last step's mix.

9

9. Start the shadows with a first general wash of highly diluted Forest Green (70-80% water).

10

10. Now I apply some glazes with the same Forest Green dilution but only on the deepest areas.

11

11. To give some extra color contrast, here I give several glazes with a highly diluted 50% mix of Red Truth and Ember Orange.

12

12. Finally, the maximum light points and small volumes are highlighted with a 70/30% mix of Banana Split and Flubber Green.

13

13. This is the final picture of the process with some extra elements painted to give a better visual effect of the green skin.
