

YELLOW METAL PLATE

Another Step by Step using the Greenstuff World paints to test the main colors: a very worn yellow plate.

1. Basecoat with Redwood Brown.

2. First highlight stippling with Flaming Orange.

3. Second highlight stippling with a 50 % mix of Flaming Orange and Cyber Yellow.

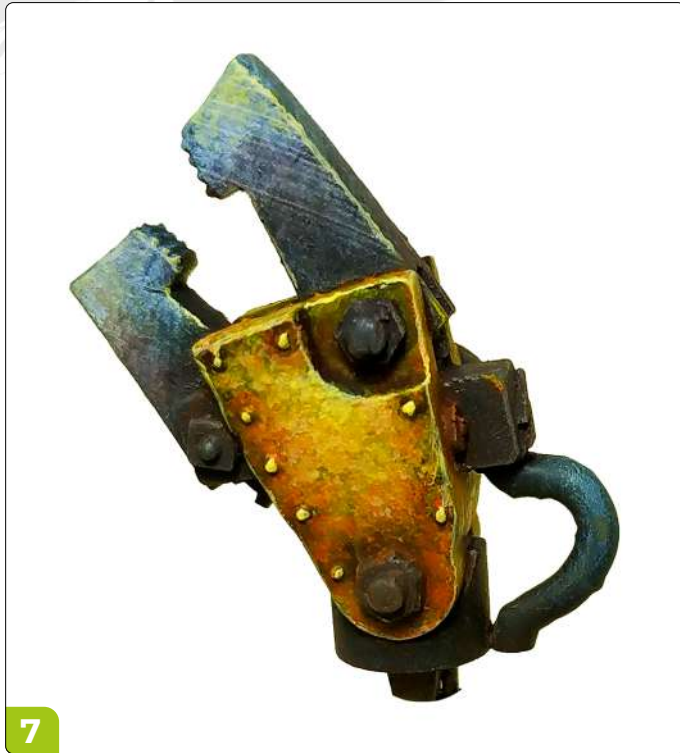

4. Next highlight is made using only Cyber Yellow.

5. I made the final highlight stippling with a 50 % mix of Banana Split and Cyber Yellow.

6. Give general glazes with diluted (60% water) Red Truth to add the shadows.

7. Using pure Banana Split outline the main edges and little rivets of the piece, to get a good definition.

8. Finally, give a general wash with 50% diluted Hydromiel Yellow Ink to get an extra yellowish tone.

Ready! Hope you like it ;)
